Real Estate 360° Analytics

Business Scenario

Assume that the company is named **UrbanNest Realty**.

UrbanNest Realty is a real estate company that operates across multiple cities and deals in both **residential and commercial properties**. The company sells and rents properties to individual customers and businesses.

Management wants to use **Power BI** to analyze the overall performance of the real estate business and gain actionable insights into sales, properties, customers, agents, leads, and marketing activities.

The management team wants the Power BI dashboard to answer the following key business questions:

- How many properties are currently available?
- How many properties have been sold or rented?
- How much revenue has been generated?
- Which cities and locations are performing well?
- Which property types are in the highest demand?
- Which marketing channels are generating the most leads?
- What is the overall lead conversion rate?
- Which real estate agents are performing well?
- What is the ROI of different marketing campaigns?
- What price ranges are customers purchasing properties in?
- How much potential revenue is currently available in the sales pipeline?
- Which properties are receiving the highest customer interest?
- What are the monthly and yearly sales trends?
- Which customer segments contribute the most revenue?
- What is the overall performance of the sales team?

The objective of this **Real Estate 360° Analytics project** is to provide management with a **complete 360-degree view of the real estate business** using interactive Power BI dashboards and data-driven insights.

2. Dashboard Pages

The **UrbanNest Realty – Real Estate 360° Analytics** solution will consist of approximately **8 interactive Power BI dashboard pages**.

Each page will focus on a specific business function and provide management with meaningful insights through **KPIs, charts, tables, maps, filters, and interactive drill-downs**.

Page 1 — Executive Overview

The **Executive Overview** will serve as the primary management dashboard and provide a high-level summary of the overall real estate business performance.

Key Performance Indicators (KPIs)

- Total Properties
- Available Properties
- Sold Properties
- Total Sales Value
- Total Revenue
- Total Leads
- Converted Leads
- Lead Conversion %
- Average Property Value
- Average Days to Sell

Key Visuals

- Monthly Revenue Trend
- Sales by City
- Sales by Property Type
- Sales Funnel
- Top 10 Locations
- Revenue vs. Target
- Sold vs. Available Properties

Business Objective

This page will enable management to quickly understand the company's overall **sales performance, property inventory, revenue generation, lead conversion, and business growth**.

Page 2 — Property Analytics

The **Property Analytics** page will provide a comprehensive analysis of the company's property inventory and characteristics.

Key Analysis Areas

- Residential vs. Commercial Properties
- Property Type Analysis
    - Apartment
    - Villa
    - Plot
    - Office
    - Shop
- Property Status
- Property Age
- City and Location-wise Property Distribution
- Property Price Range
- BHK Analysis
- Carpet Area
- Built-up Area

Key Visuals

- Property Type Distribution
- City/Location Map
- Price Range Analysis
- BHK-wise Sales
- Available vs. Sold Properties
- Average Price per Sq. Ft.

Business Objective

This page will help management understand **property inventory, customer preferences, pricing patterns, and the distribution of properties across different cities and locations**.

Page 3 — Sales Analytics

The **Sales Analytics** page will focus on analyzing actual property sales and overall sales performance.

Key Performance Indicators (KPIs)

- Total Sales
- Total Sales Value
- Average Deal Value
- Monthly Sales
- Year-over-Year (YoY) Growth
- Target Achievement %

Sales Drill-Down Structure

The dashboard will provide a hierarchical analysis from the overall location level down to individual customers:

City → Location → Property → Sales Agent → Customer

This drill-down structure will allow users to identify the specific factors contributing to sales performance.

Key Visuals

- Monthly Sales Trend
- City-wise Sales
- Agent Performance
- Property Type Sales
- Sales Target vs. Actual
- Top 10 Agents
- Top 10 Properties

Business Objective

The objective of this page is to identify **sales trends, high-performing cities, properties, and agents**, while also measuring sales performance against predefined targets.

Page 4 — Lead & CRM Analytics

The **Lead & CRM Analytics** page will analyze the complete customer lead journey, from lead generation to final property sale.

Lead Sources

The company may receive leads through multiple channels:

- Website
- Google Ads

- Facebook
- Instagram
- Property Portals
- Referral
- Walk-in
- Broker

Lead Conversion Funnel

The complete lead journey will be represented through the following funnel:

Leads → Contacted → Site Visit → Negotiation → Booking → Sale

Key Performance Indicators (KPIs)

- Total Leads
- Contacted Leads
- Site Visits
- Bookings
- Converted Leads
- Lead Conversion %
- Average Conversion Time

Key Analysis Areas

- Lead Source Performance
- Marketing Campaign Performance
- City-wise Leads
- Agent-wise Lead Conversion
- Lead Status
- Monthly Lead Trend

Business Objective

This page will help the CRM and sales teams identify **which lead sources generate quality prospects, where leads are dropping in the sales funnel, and which agents are successfully converting leads into customers**.

Page 5 — Agent Performance

The **Agent Performance** page will provide a 360-degree analysis of the real estate sales team.

Key Performance Indicators (KPIs)

- Total Agents
- Leads Assigned
- Leads Converted
- Conversion %
- Site Visits
- Bookings
- Sales Value
- Commission

Key Analysis Areas

- Agent-wise Sales
- Agent-wise Conversion
- Agent-wise Revenue
- Leads vs. Conversion
- Target vs. Achievement
- Commission Analysis

Agent Performance Matrix

An **Agent Performance Matrix** will also be included to provide a detailed comparison of individual agents based on key performance indicators such as:

- Leads Assigned
- Site Visits
- Bookings
- Converted Leads
- Sales Value
- Conversion Rate
- Target Achievement
- Commission

Business Objective

This page will help management monitor **individual agent performance, sales productivity, lead conversion efficiency, target achievement, and commission generation**.

Page 6 — Marketing Analytics

The **Marketing Analytics** page will provide insights into the effectiveness of different marketing channels and campaigns.

Marketing Channels

The analysis will cover the following marketing channels:

- Google Ads
- Facebook
- Instagram
- YouTube
- Website
- Property Portals
- Offline Events
- Referral

Key Performance Indicators (KPIs)

- Marketing Spend
- Leads Generated
- Cost per Lead (CPL)
- Conversions
- Conversion Rate
- Revenue Generated
- Return on Investment (ROI)

Example Marketing Performance

For example:

- Marketing Spend = ₹10,00,000
- Leads Generated = 5,000
- Converted Leads = 250
- Revenue Generated = ₹8 Crore

The dashboard will further analyze these metrics **channel-wise and campaign-wise** to understand the effectiveness of individual marketing activities.

Business Objective

The objective of this page is to measure **marketing efficiency, lead generation, conversion performance, revenue contribution, and ROI** across different marketing channels.

Page 7 — Finance Analytics

The **Finance Analytics** page will provide a comprehensive financial overview of the real estate business.

Key Performance Indicators (KPIs)

- Gross Sales
- Revenue
- Agent Commission
- Marketing Cost
- Operational Cost
- Net Revenue
- Profit
- Profit Margin

Key Analysis Areas

- Monthly Revenue
- Revenue by City
- Revenue by Property Type
- Revenue vs. Cost
- Profit Trend
- Agent Commission
- Payment Status

Business Objective

This page will help management understand the company's **financial performance, revenue generation, expenses, profitability, commission costs, and payment collection status**.

Page 8 — Location & Market Analytics

The **Location & Market Analytics** page will provide a geographical and market-level view of the real estate business.

Key Analysis Areas

- State
- City
- Location

- Property Type
- Average Property Price
- Average Price per Sq. Ft.
- Customer Demand
- Sales
- Property Inventory

Location Hierarchy

The dashboard will provide a geographical drill-down structure:

State → City → Location → Property

For example:

Pune

- Hinjewadi
- Baner
- Wakad
- Kharadi
- Hadapsar
- Viman Nagar

Key Business Questions

This page will help answer questions such as:

- Which cities generate the highest sales?
- Which locations have the highest property demand?
- Which areas have higher average property prices?
- Which locations have higher sales per square foot?
- Where is property inventory concentrated?
- Which property types are popular in specific locations?

Business Objective

The objective of this page is to identify **location-wise market trends, demand patterns, pricing differences, sales performance, and inventory distribution**.

Overall Dashboard Structure

The complete Power BI solution will provide an integrated view of the business across the following areas:

Page	Dashboard	Primary Focus
1	Executive Overview	Overall Business Performance
2	Property Analytics	Property Inventory & Characteristics
3	Sales Analytics	Sales Performance
4	Lead & CRM Analytics	Lead Generation & Conversion
5	Agent Performance	Sales Team Performance
6	Marketing Analytics	Marketing Performance & ROI
7	Finance Analytics	Revenue, Cost & Profitability
8	Location & Market Analytics	Geographic & Market Analysis

Together, these eight dashboard pages will provide **360-degree visibility into UrbanNest Realty's properties, sales, customers, leads, agents, marketing activities, financial performance, and geographical market trends**.
